KAMPALA PROJECTS

Methodology:

Under this programme, permission is sought from office of district health officer. Village health teams (VHT) local council chair persons, area FM radio stations, churches, mosques and posters help in mobilization.

Outcome:

Clients seen had mainly refractive errors: Myopia shortsightedness) hyperopia (long sightedness), presbyopia (reading small print with difficulty, a condition which occurs at around 40 years) these refractive errors would be corrected using a pair of spectacles.

Common eye diseases were treated, mainly allergies, bacterial infections. Foreign bodies were removed under local anesthesia.

Cataracts were screened and referred for surgery. (A blinding condition due to clouding of the lens).

Glaucoma ("high pressure" of the eyes were screened and referred)

Projects:
